

Report
Of
Data Analytics Job Simulation at Deloitte

Submitted
To
School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech CSE

By
Roll Number of Student: 2410031595
Name of Student: SHUBHAM KUMAR
Batch: 2026-27

CANDIDATE'S DECLARATION

I, SHUBHAM KUMAR, do hereby declare that the internship report titled “Data Analytics Job Simulation at Deloitte” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature

Student Name: SHUBHAM KUMAR

Roll No.: 2410031595

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I express my gratitude to my parents for their blessings.

Signature

CHAPTER 3: INTERNSHIP COMPLETION CERTIFICATE

Deloitte.

Shubham Kumar
Data Analytics Job Simulation

Certificate of Completion
September 2nd, 2026

Over the period of September 2026, Shubham Kumar has completed practical tasks in:

Data analysis
Forensic technology

Tina McCreery
Chief Human
Resources Officer,
Deloitte

Enrolment Verification Code 6a9861c403d3b40b6d43a768 | User Verification Code 6a98606a6d3d3b40b6d437d88 | Issued by Forge

CHAPTER 4: PROJECT DESCRIPTION

4.1 Introduction

This report presents the work undertaken during the Deloitte Data Analytics Job Simulation, a virtual internship program hosted on the Forage platform. The simulation was designed to replicate the day-to-day responsibilities of a data analyst working within Deloitte's forensic technology practice, providing hands-on exposure to real-world business problems that involve data analysis, data cleaning, and investigative reasoning. Over the course of the program, practical tasks were completed in two core areas: data analysis and forensic technology, culminating in the award of a Certificate of Completion by Deloitte on September 2, 2026.

4.2 Organization Profile

Deloitte is one of the world's largest professional services networks, providing audit, consulting, tax, financial advisory, risk advisory, and forensic technology services to clients across industries. Deloitte's Forensic Technology practice specialises in using data analytics, digital forensics, and investigative techniques to help organisations detect fraud, resolve disputes, and manage risk. Through its collaboration with Forage, Deloitte offers job simulation programs that allow students and early-career professionals to experience the kind of analytical work performed by its consulting teams in a guided, self-paced virtual environment.

4.3 Problem Statement

Organisations today generate vast volumes of transactional and operational data, within which fraudulent or anomalous activity can often go undetected using conventional review methods. The simulation was framed around a forensic technology scenario in which raw data needed to be analysed, cleaned, and interpreted in order to identify unusual patterns, generate actionable insights, and communicate findings clearly to a non-technical audience — mirroring the type of investigative data analysis Deloitte's forensic teams perform for real clients.

4.4 Project Objectives

- To understand how forensic technology and data analytics are applied to detect irregularities in business data.

- To develop practical skills in data cleaning, organisation, and interpretation using spreadsheet-based tools.
- To create clear, insight-driven visualisations and summaries from a raw dataset.
- To practise translating analytical findings into a business-ready presentation or memo for stakeholders.
- To gain exposure to the professional workflow and expectations of a Deloitte forensic technology consultant.

4.5 Scope of the Project

The scope of the simulation was limited to the self-contained tasks provided by Deloitte via the Forage platform. It covered the analysis of a supplied dataset, the identification of key trends and anomalies within it, and the preparation of a summary of findings. The project did not involve access to live client data or Deloitte's internal systems; all work was carried out in a simulated, sandboxed environment intended purely for skill-building and learning purposes.

4.6 Technologies and Tools Used

- Microsoft Excel – for data cleaning, sorting, filtering, and formula-based analysis.
- Data visualisation techniques – charts and tables to represent trends and outliers.
- Forage learning platform – for task briefs, resources, and submission of completed work.
- Basic forensic analysis techniques – pattern recognition and anomaly identification within structured data.

4.7 System Architecture

As this was an analytical, spreadsheet-based simulation rather than a software development project, there was no software system architecture to design. The workflow instead followed a structured data-analysis pipeline: raw data intake, data cleaning and validation, exploratory analysis, anomaly/trend identification, and finally the consolidation of findings into a summary output for review.

4.8 Methodology

- Reviewed the task brief and business context provided for each module of the simulation.
- Imported and inspected the raw dataset to identify inconsistencies, missing values, and formatting issues.
- Cleaned and structured the data to make it suitable for analysis.
- Applied analytical techniques to identify trends, patterns, and potential anomalies within the data.
- Summarised the findings in a clear, business-oriented format suitable for a non-technical stakeholder.
- Submitted completed tasks on the Forage platform for review, leading to the award of the completion certificate.

4.9 Expected Outcomes

On completion of the simulation, the following outcomes were achieved: a working understanding of how forensic technology teams use data analytics to support investigations; practical experience in cleaning and analysing real-world-style datasets; improved ability to identify anomalies and communicate data-driven findings; and a recognised Certificate of Completion issued by Deloitte, validating the skills developed during the program.

4.10 Certificate of Completion and Other Communication

The Certificate of Completion issued by Deloitte, confirming successful completion of the Data Analytics Job Simulation (covering data analysis and forensic technology), is attached in Chapter 3 of this report.
