School of Computer Science and Engineering

INTERSHIP REPORT

Data Analytics Job Simulation at Deloitte

Submitted in partial fulfilment of the requirement for the degree of B.Tech in Computer Science & Engineering

Name of Student: Shubham Kumar

Roll Number: 2410031595

Batch: 2026-27

01 Declaration & Acknowledgement

Candidate's Declaration

I, Shubham Kumar, declare that this internship report titled “Data Analytics Job Simulation at Deloitte” has been completed by me to fulfil the requirement for the award of the degree of B.Tech in CSE. All references have been duly quoted, and this report is my own original work, not submitted elsewhere for any degree or diploma.

Shubham Kumar
Roll No.: 2410031595

Acknowledgement

I am grateful to everyone who supported me throughout this internship program — for their guidance, constructive criticism, and friendly advice during this work. I sincerely thank them for sharing their truthful and illuminating views on issues related to this project, and I express my heartfelt gratitude to my parents for their blessings.

Shubham Kumar
Roll No.: 2410031595

Internship Completion Certificate

Deloitte.

Shubham Kumar
Data Analytics Job Simulation

Certificate of Completion
September 2nd, 2026

Over the period of September 2026, Shubham Kumar has completed practical tasks in:

Data analysis
Forensic technology

A handwritten signature in black ink, appearing to read 'T. McCreery'.

Tina McCreery
Chief Human
Resources Officer,
Deloitte

Enrolment Verification Code 6a9861c403d3b40b6d43a768 | User Verification Code 6a98606a03d3b40b6d437d88 | Issued by Forage

02 Introduction

This report presents the work undertaken during the Deloitte Data Analytics Job Simulation, a virtual internship program hosted on the Forage platform.

The simulation replicated the day-to-day responsibilities of a data analyst within Deloitte's Forensic Technology practice, offering hands-on exposure to real-world business problems involving data analysis, data cleaning, and investigative reasoning.

Practical tasks were completed across two core areas — data analysis and forensic technology — culminating in the award of a Certificate of Completion by Deloitte on September 2, 2026.

2

Core focus areas

1

Certificate awarded

100%

Virtual, self-paced

03 Organization Profile — Deloitte

Deloitte is one of the world's largest professional services networks, providing audit, consulting, tax, financial advisory, risk advisory, and forensic technology services to clients across industries.

Forensic Technology Practice

Uses data analytics, digital forensics, and investigative techniques to help organisations detect fraud, resolve disputes, and manage risk.

Collaboration with Forage

Offers guided, self-paced job simulation programs that let students experience the analytical work performed by Deloitte's consulting teams.

04 Problem Statement & Objectives

Problem Statement

Organisations generate vast volumes of transactional data in which fraud or anomalies often go undetected by conventional review. The simulation involved analysing, cleaning, and interpreting raw data to identify unusual patterns and communicate findings clearly — mirroring Deloitte's real forensic data-analysis work.

Project Objectives

- 1 Understand how forensic technology and data analytics detect irregularities in business data.
- 2 Develop skills in data cleaning, organisation, and interpretation using spreadsheet-based tools.
- 3 Create clear, insight-driven visualisations and summaries from a raw dataset.
- 4 Practise translating analytical findings into a business-ready presentation for stakeholders.
- 5 Gain exposure to the professional workflow of a Deloitte forensic technology consultant.

05 Scope of the Project & Tools Used

Scope

The scope was limited to the self-contained tasks provided by Deloitte via Forage: analysing a supplied dataset, identifying key trends and anomalies, and preparing a summary of findings.

The project did not involve access to live client data or Deloitte's internal systems — all work was carried out in a simulated, sandboxed environment intended purely for skill-building.

Technologies & Tools

- Microsoft Excel — data cleaning, sorting, filtering, formula-based analysis
- Data visualisation — charts and tables to represent trends and outliers
- Forage learning platform — task briefs, resources, and submissions
- Forensic analysis techniques — pattern recognition and anomaly identification

06 System Architecture & Methodology

As an analytical, spreadsheet-based simulation rather than a software project, the workflow followed a structured data-analysis pipeline:

Methodology

- Reviewed the task brief and business context for each simulation module.
- Imported and inspected raw data to identify inconsistencies and missing values.
- Cleaned and structured data to make it suitable for analysis.
- Applied analytical techniques to identify trends, patterns, and anomalies.
- Summarised findings in a clear, business-oriented format for stakeholders.
- Submitted completed tasks on Forage, leading to the award of the certificate.

07 Expected Outcomes

1

Working understanding of how forensic technology teams use data analytics to support investigations

2

Practical experience in cleaning and analysing real-world-style datasets

3

Improved ability to identify anomalies and communicate data-driven findings

4

A recognised Certificate of Completion issued by Deloitte, validating the skills developed
